

We are a middle aged couple with two school aged boys living in the South Burnett. We live by old time values, believing that honesty and respect are the foundation of any good relationship. We have a work history including rural vet practice.

We run a cattle grazing operation adopting the principles of sustainable grazing and management. We are looking to expand the number of cattle managed to secure our financial stability.

We are looking to work with land holders who are currently sparing feed which could otherwise be utilised, without affecting their current operation.

We are looking for medium to long term opportunities which enable a beneficial outcome for both parties.

We are open to ideas as to how these opportunities could be structured and appreciate your input.

We are not limited to the traditional lease, lease to buy, profit share arrangements.

Other models could be

- Intergenerational land custodians
- Taking the tired out of 'retirement' allowing the experienced producers to stay on the family property, contributing their knowledge while not having to shoulder the associated work load.
- Cattle leasing options would be considered.

We are keen to talk with people who think this can fit with their current situation, benefitting both parties
