

Position: Bovine Reproduction Practitioner  
Location: Rockhampton, QLD  
Employment Status: Permanent Full-time

Do you have a genuine interest and experience in bovine reproduction and the beef cattle industry? As a Bovine Reproduction Practitioner, you will manage all aspects of Rocky Repro's reproduction service delivery.

This is a key role with a high degree of practical hands-on service delivery working with many of Queensland's premier stud stock producers across all aspects of reproduction work.

The position would suit either an experienced reproduction professional or a veterinarian who would like work full time with no after hours on call work. Your responsibilities will be commensurate with your experience and qualifications.

### **Rocky Repro**

Rocky Repro is Queensland's premier Bovine Reproduction Centre offering a range of in-centre and on-farm bovine reproduction services and our clients represent some of the leading seedstock producers in Australia.

Rocky Repro is an export accredited centre with a staff of 14 professionals supporting the centre's production and marketing operations. Co-owner, veterinary Dr Ced Wise has 30+ years' experience in the cattle industry and offers a unique mentoring opportunity in the areas of bull fertility, semen collection, embryo transfer and IVF.

Rocky Repro is located only 15km from Rockhampton the hub of central Qld and only a 1 hour flight to Brisbane. The Centre's purpose-built facilities are located in a semi-rural lifestyle environment. Rockhampton has a population of approximately 80,000 and is well serviced with schools, hospitals, art and sporting facilities, all the amenities of a vibrant regional centre, and only ½ an hour from the beach – an ideal location for both singles and families.

### **The Position**

The unique position we have available is full time plus occasional (seasonal) overtime, Monday to Friday (38 hours) with no scheduled weekend work and no after-hours on call work. You would be working primarily in a professional purpose-built non-clinic environment with some on-farm work within reasonable traveling distance.

The primary responsibilities of the role include bull collections, AI program design & management, AI delivery, pregnancy testing (both manual and ultrasound). Should the successful candidate be a qualified veterinarian, other responsibilities may include VBBSE testing, embryo flushing, general associated non-clinical veterinary services, and export health testing protocol compliance.

Currently most of our in-centre work is based on bull work, however Rocky Repro is very interested in expanding our in-centre capacity to accommodate more female reproductive work.

We are offering an attractive salary package commensurate with experience, a work vehicle and phone, 4 weeks annual leave plus reasonable study and conference leave. We are also very open to supporting and assisting your personal professional development with training and accreditation in relevant areas.

### **About You**

You are a dedicated professional with a mature work ethic and a high attention to customer service. You will enjoy a high degree of autonomy, while being well supported by the Centre's staff team of lab technicians, morphologists, livestock handler, and general processing and dispatch staff etc. You will enjoy working in a close-knit team with great social dynamics.

We are flexible regarding start dates and job specifics and would be delighted to discuss options further.

Interested applicants please send your resume and cover letter to the following email address or call for a confidential enquiry.
