

FOR SALE - RHODESIA

What do you get when you incorporate Tuli genetics into your breeding program?

- Thousands of years of isolated natural selection in arid, predatory environments leading to a genetic pre-disposition to collective grazing that builds soil carbon and an exceptional contribution to hybrid vigour in either Bos Indicus or Bos Taurus herds.
- The most heat tolerant cattle breed on earth originating from its natural adaptation to the condition in the Kalahari Desert and Lowveld of Zimbabwe. Selected by CSIRO scientists for import to Australia.
- Exceptional fertility, milk and meat quality with unrivalled grass conversion efficiency and ability to thrive in severely deficient landscapes while exhibiting a docile low stress temperament.

Hartwood Rhodesia is a homozygous polled, docile, slick, recessive red, dun gene carrier. He is myostatin free, flat backed and heat tolerant. He is a fertile Tuli sire that will add resilience to any breeding herd in the North. Rhodesia is moderately framed at 850kg. The benefit he brings in the form of hybrid vigour makes him the maternal, heifer bull choice for Northern Australia.
